To All Residents of Spring Valley Village:

The City of Spring Valley Village, in a continued effort to improve the infrastructure of the City, will be undertaking the repaving of the parking lots and driveways around the City Hall complex. The areas to be repaved include both the north and south parking areas adjacent to both parks, the entrance drive up to the City Hall building, and the driveways around the building. The new pavement will be asphalt, and the parking areas will be restriped. The improvements also include upgrading the drainage structures under the existing pavement which will help reduce ponding within the parking areas during rain events. We anticipate this project to take between one and two months to complete. We do realize that this will pose temporary inconveniences to those who visit our parks adjacent to the parking areas and those visiting our City Hall complex. Since there will be limited parking at City Hall, you may use the parking area north of the new park and the parking lot at Grace Community Church. We apologize in advance for this inconvenience and respectfully request your patience. Our goal is only to improve the overall appearance and function of our infrastructure in the City and specifically the City Hall complex area.

Thank You,
Mike Andrews, Mayor
