

## You received a NEW water meter today!

The City of Spring Valley's contractor, Ferguson, was here to upgrade your water meter to a new advanced water meter. Changes in water pressure during the installation process can result in: Discolored Water, Air in the Water Lines, Small Particles of Sediment.

Prior to using your water, we recommend that you flush your lines by turning on your bath tub's cold water faucet or use an outside faucet. Avoid flushing from faucets that have aerator attachments or hot water faucets that may draw sediment into your water tank.

If you are experiencing any issues after the new meter installation and need assistance, please call 612-437-9691.

Authorized by the City of Spring Valley Village.  
For questions or concerns, please call 713-465-8308.
